

cyberweek.org

Let's Make the Web Safer Together.

CyberWeek is a flexible week-long curriculum geared towards K-12 students to detect online threats, gain a better understanding of how the internet works & spark an interest in the cybersecurity careers of the future.

CASE STUDY

CyberWeek @ Oxon Hill HS

Cyberweek.org in conjunction with the US Naval Research Laboratory organized a weeklong event at Oxon Hill High School located in Prince George's County Maryland, a historically underserved community outside of the nation's capital. As students are large consumers of the internet, having them understand how to combat cyber threats and maintain proper cyber hygiene is crucial. It was great to see students so enthusiastic to learn about the cyber principles behind having a safe presence online.

Activities designed to Educate & Inspire

Smart Cyber Hygiene

Dive into strong passwords, virus protection, phishing messages, and detecting scams

Tech Role Models

Meet the diverse tech pioneers & innovators that build the world we live in today and modern way of life

Cyber Careers

The country will need thousands of cyber professionals in the upcoming years. Learn about internships and career building opportunities

How the Web Works

Explore the key elements of the internet such as SSL, the Cloud & app security
